## DESCRIPTION

The LH1519 relays are miniature, optically-coupled relays with high-voltage MOSFET outputs. The relays are capable of switching AC or DC loads from as little as nanovolts to hundreds of volts. Likewise, the relays can switch currents in the range of nanoamps to hundreds of millamps. The MOSFET switches are ideal for small signal switching and are primarily suited for DC or audio frequency applications.

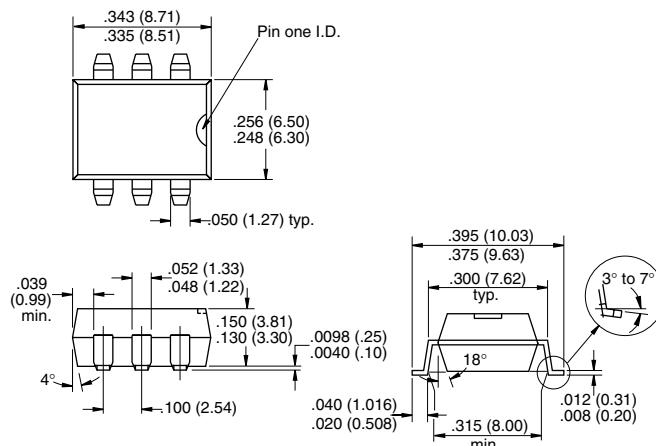

The LH1519 relays offer low on-resistance.

## Recommended Operating Conditions

## Absolute Maximum Ratings, $T_A=25^\circ\text{C}$

Stresses in excess of the absolute Maximum Ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute Maximum Ratings for extended periods of time can adversely affect reliability.
